About Me

I am a 3rd year Computer Science student, currently looking for a graduate position starting around July 2023. My professional interests include Game Development, DevOps and OSS.

To challenge my understanding of all things tech, I like to tinker on small projects that I find interesting and constructive. I also try to regularly participate with friends in game jams such as Ludum Dare. Recently I have begun to contribute significantly to open source, be it my own repositories or others.

I am looking for a job where I can use my existing skills and also build on top of them. With those skills and experience in group projects, I believe that I could be a strong asset to an existing team.

Education

Computer Science Bsc | University of Nottingham | Predicted 1st

Sep 2019 - Jun 2023

- Group Project (1st) - Created a interactive visual model for "Parity Games", achieved the "Best Code" prize out of 30+ teams.
- Operating Systems and Concurrency (1st) - C programming with a focus on parallel programming.
- C++ Programming (1st) - Learned and used a provided framework to recreate Larry's Escape (below).
- Programming and Algorithms (1st) - Systems level C programming using pointers and creating data-structures.
- Computer Fundamentals (1st) - Low level networking and boolean logic.
- Systems and Architecture (1st) - ARM programming, parallel processing and networking.
- Math for Computer Science (1st) - Predicates, Propositions, Proofs, etc.
- Intro to Software Engineering (1st) - Worked in a team to design, test and code an application.
- Programming Paradigms (1st) - Learning OOP in Java and FP in Haskell.

Experience

Computer Science Mentor Scheme

Sep 2020 - June 2021

- Lead workshops for the first-years to aid their learning.
- Organised social events.
- Communicated and built my network within the university.

App Development | Manta Group Ltd.

Jul 2020 - Oct 2020

- Competitive stock prediction app using Flutter and Firebase.
- Employed an iterative development cycle with testers providing regular feedback.
- Client and Tester feedback directly impacted design and functionality as needed.
- A strong relationship with the client allowed for quick alterations to UI such as colour and layout changes.

Larry's Escape

Jan 2017 - Jun 2020

- Sequel to my A Level project, building on existing foundations and maintaining code.
- Implemented a custom A* pathfinding algorithm and recursive maze generation algorithm.
- Used the long-standing LibGDX platform as a framework while also contributing to it.
- Public release on itch.io, source code on my Gitea instance linked on my website (above).

Hack Notts 2019

Nov 2019

- Used NodeJS and GitLab CI to fetch data and send messages over the Discord platform.
- Created a discord bot that fetches module scores to save time and reduce suspense.
- Worked in a duo, effectively communicating to produce a fully functional prototype by the end of the allotted time.

GMTK Game Jam 2019

Aug 2019

- Worked in a team environment under heavy time constraints.
- Adopted smart time management.
- Despite setbacks, including the loss of a key team member, led the team to produce a top 25% submission.

Technical Skills

- **Languages:** Rust, Java, C++, C#, JavaScript, Haskell, Web
- **Tools:** Git, Linux, Windows, IntelliJ, VSCode, Flutter, Bevy, Libgdx, Unity 3D, Gradle, CMake

Interests

Rock Climbing

- Member of the University of Nottingham Climbing Society.
- Completed courses including bouldering and lead climbing.

Competitive Team-based eSports

- Maintaining team skills in demanding environments.
- Adaptation to rapidly changing situations.
- Commitment to bi-weekly training and game days.
